Founder: James R (Cornell (B.Com.)

Summary and Recommended Investment Strategy.

Remain fully invested in the recommended shares.

Investment Outlook.

Our Forecasting models are slightly Bullish (see at right) and knowledgeable *insiders* are buying shares (see Pages 10 and 12). We believes shares are under-valued . . . and presumably so does the Canadian bidder for one of our companies!

As discussed last month, we also believe that a slow economic growth, competitive business environment that will drive competition, efficiency and innovation can be a favourable environment for stockmarket investment.

Share prices started rising early this year but we pointed out in February they would probably move higher as most market commentators were very sceptical, calling the rise "a Bear Market rally" and warning of a "coming 2012 market crash".

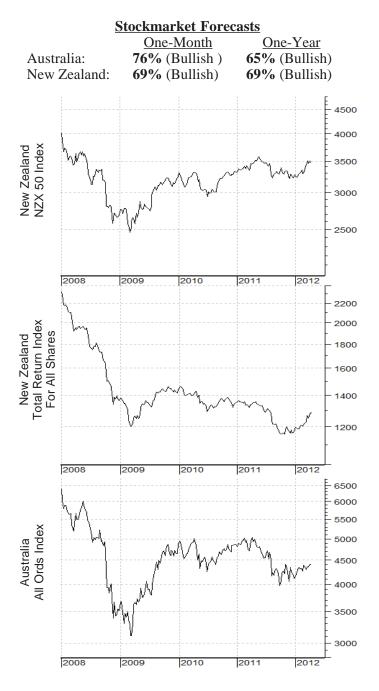

Last week we read "It was nice while it lasted, but the bear market rally is over". Yes, it was nice for those of us fully invested in shares . . . but the people that wrote that were so negative about the stockmarket we doubt that *they* owned any shares. If it is now widely expected that the "rally is over" then the stockmarket will likely do the opposite of that expectation and <u>continue to move higher</u>.

If private investors and fund managers *expect* share prices to fall, they will *already* have sold and be holding cash. Selling will therefore diminish (i.e. who is left to sell?) and cashed up investors are *future* buyers. These are the conditions that will drive share prices higher!

Deciding what the stockmarket will do tomorrow, or next week, or next month often feels like the *most important* investment decision. It isn't. What is really important is finding companies whose shares have the potential to appreciate many-fold in value over many years!

This newsletter was established over 31 years ago with just that objective. It has always focused upon taking a <u>scientific and intelligent approach to building wealth from</u> <u>long term investment in the stockmarket</u>. We didn't get rich selling newsletter subscriptions but we did get rich following all of our own advice and buying *and holding* shares including Campbell Brothers, Centennial Coal, Computershare, Radio Otago, M2 Telecommunications, Michael Hill, NZ Refining, Toll Holdings, The Reject Shop, Village Roadshow and Vision Systems!

Our current portfolio will yield our *future* 5-bagger, 10bagger and 20-bagger gains. So remain fully invested in these recommended shares.

"Performance Forecasts" are computer generated predictions of the relative future price performance of a company's shares over the next three to six months. Performance Forecasts are calculated for every listed NZ share (except Investment Trusts) on a rating scale using the letters "A" (Highest potential for capital appreciation over the next 3-6 months), "B" (Above Average), "C" (Average), "D" (Below Average) and "E" (Lowest). These predictions are NOT buy or sell recommendations, but can be useful to help time planned purchases or sales, or to identify shares worthy of further study and analysis.

New Zealand's "Fair Dividend Rate" Tax

A New Zealand resident investor's tax liability in any year is based upon the <u>lower</u> of (1) an assumed income equal to 5% of the starting value of the shares (subject to the FDR tax) <u>or</u> the actual total return from those shares (i.e. the "Comparative Value" method).

As the Australian stockmarket fell about 11% over the year to 31 March 2012 *and* the Australian dollar fell about 7% against the NZ dollar, <u>most investors will</u> probably have a *loss* under the *Comparative Value* method - and therefore have no "Fair Dividend Rate" tax to pay for the year just ended on 31st March 2012.

Of course, individual portfolios will vary from this market average performance, so every investor needs to calculate their own, actual *Comparative Value* return to prove a nil tax liability.

FDR really is an example of a "bad" tax - imposing high compliance costs on investors, while raising little revenue for the government! How long can it be before the tax department and *(Continued on Page 4)*

(1) Cellnet Group includes 11/2 shares in Mnet Group distributed to shareholders.

Recommended Investments

(Continued from Page 3) politicians openly talk about "investors exploiting the *Comparative Value* <u>loophole</u>"?

Investors probably also need to calculate their *potential* FDR tax revenue for the current tax year to ensure the payment of correct provisional tax.

Most foreign investments are subject to the FDR tax *except* shares of Australian companies included in the All Ordinaries index (where NZ investors are taxed on the actual income received). The Inland Revenue produces a list an exempt shares but long after the end of the tax year!

The following shares in our *Recommended Portfolio* will be subject to the 5% FDR tax for the current tax year (to March 2013), based upon their market value as at 1st April 2012:

Company	Market Value
	as at 1/4/12
Atlas South Sea Pearl	A\$0.058
Cellnet Group	A\$0.235
Circadian Technologies	A\$0.49
Clarius Group	A\$0.425
CPT Global	A\$0.48
Ellex Medical Lasers	A\$0.19
Fiducian Portfolio Services	A\$1.045
Integrated Research	A\$0.625
Mnet Group	A\$0.016
Nomad Building Solutions	A\$0.135
Novarise Renewable Resources	A\$0.185
Penrice Soda Holdings	A\$0.089
Probiotec	A\$0.295
Prophecy International	A\$0.26
	. 1 . 177 1 11

These values need to be converted to NZ dollars at the 1st April 2012 exchange rate of 0.7879.

New Zealand Shares

Michael Hill International's revenues for the nine months to 31 March 2012 show continued difficult retail conditions in Australia - where the group generates twothirds of its revenue - but growth in its other markets.

In local currency terms, Australian same store revenues *fell* 2.4%, but new stores lifted total revenues 3.0% (to A\$199.6 million or NZ\$257.2 million). New Zealand same store revenues were up 8.9%, with total revenues up 7.9% to NZ\$83.7 million. Canadian same store revenues grew 6.4%, with total revenues up 22.2% (to C\$33.4 million or NZ\$41.5 million). Total revenues from the United States stores rose 18.5% (to US\$7.1 million or NZ\$8.9 million).

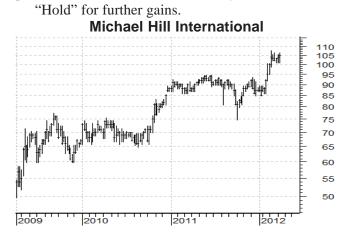

The *Professional Care Plan* (PCP) revenues rose 208% to \$20.2 million. As this newsletter estimated last month, the company now confirms that "cash flow continues to grow, due primarily to the ongoing success of the Professional Care Plan product". As we also estimated last month, this puts the company in line to be virtually debt-free by the end of this financial year (i.e.

30 June 2012).

This continued strong cashflow (and accumulating surplus cash in the bank) can only further boost shareholder returns from investing in Michael Hill International shares. Unlike two of the company's directors - who manage separate Funds Management businesses which sold their clients Michael Hill shares to Durante Holdings - this newsletter recommends that its clients "Hold" for further significant gains over the months and years immediately ahead!

Investors - and investment advisers - dream about 10-bagger investments (i.e. shares that rise 10-fold in value) but they are very rare. Just one or two 10-baggers can make you rich . . . assuming, of course, that you didn't make the common mistake of selling half your investment when it was up just 100% in value!

This newsletter has had a few 10-bagger and 20 bagger investments, but Michael Hill International shares could become a 100-bagger share for us within the next <u>3-5 years</u>. The ongoing higher net cash surpluses (boosted by the PCP) could justify re-rating the shares to 200-250 cents. These continuing high cash surpluses can finance a significant boost to the growth in new stores (increasing the growth rate in revenues, net profits and cash surpluses) and/or increase the cash distribution to shareholders. Dividends could be increased significantly, although a share repurchase (either onmarket or a pro-rata off-market) would be more tax efficient. A share repurchase would boost earnings per share - and further accelerate the growth in the value of these shares. This higher growth could take the share price to 450-500 cents within a few years.

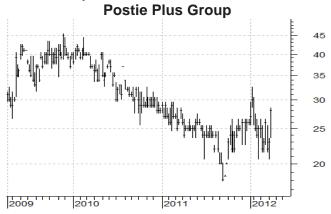

Postie Plus Group's revenues fell 4.6% to \$53.9 million for the year to 29 January 2012, with a 3.5% *loss* of \$775,000 (*minus* 1.9 cents per share).

There was a net operating cash surplus of \$2.1 million, up from a *deficit* of \$5.1 million a year earlier.

Postie Plus Group has a "conditional agreement" to sell its *Babycity* stores for a sum of around \$4½-5 million (10-12 cents per share), subject to shareholder approval, with settlement expected in early May. This

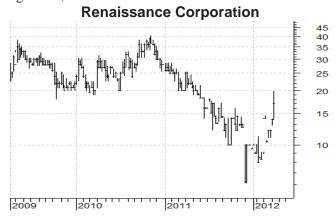

business (which sells "a lot of low margin", non-apparel items) does not fit the group's "business model and growth strategy".

The cash from this sale, plus debt plus a possible cash issue to shareholders later this calendar year will be used to "acquire well-known apparel retail brands". The group will seek to double annual revenues to around \$200 million to improve its business economics through economies of scale and better utilisation of its efficient back office systems.

Renaissance Corporation has received a further \$2,038,000 (including GST) insurance payout on 30 March relating to the Christchurch earthquake. \$913,000 was for material damage and \$1,125,000 relates to loss of profits.

Renaissance Corporation has been appointed to provide hardware, services and support under an *All-of Government IT Supply Agreement* covering government agencies, councils and schools.

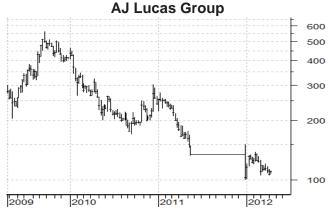

<u>Australian Shares</u>

(*This section is in Australian currency, unless stated.*) **AJ Lucas Group** reports wet weather in Queensland has impacted on the company's drilling operations. The BCI division has also experienced delays with projects.

The company expects a "much stronger final quarter", but the full year earnings (before interest, tax and depreciation) has been downgraded from \$50 million to \$32-37 million.

The company hopes to place the 11.5 million share

shortfall from its recent cash issue at 135 cents before 30 June and has "identified parties willing to subscribe to the placement on these terms". This placement will require shareholder approval and an EGM is expected in mid-May.

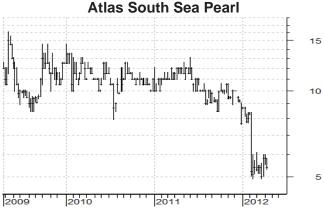

<u>Atlas South Sea Pearl</u> reports that 91% of its \$4.2 million cash issue was taken up by shareholders, with the remaining 9% placed with shareholders applying for additional shares.

Industrialist WG Martin has become the largest shareholder with 30,643,000 shares (13.5% of the company). The Chairman and Chief Executive, SPBirkbeck, has 27,247,100 shares (12.3%) but-subject to shareholder approval - will be issued 2,500,000 shares in lieu of salary.

The directors believe the pearl industry is "in for another two years of pain" (which will help force out weaker competitors) but that Atlas South Sea Pearl with its "low cost of production" and "pipeline of new growth strategies" was "well placed to capitalise on improving conditions".

With cash from the new equity and new management, Atlas South Sea Pearl has the potential to become an attractive recovery/growth investment. "Buy".

<u>Campbell Bothers</u> has acquired UK based Eclipse Scientific Group and Ireland based Advanced Micro Services from Environmental Scientifics Group for an "Enterprise value" (i.e. cash plus any debt taken over in the companies) of around A\$39 million.

(Continued on Page 6)

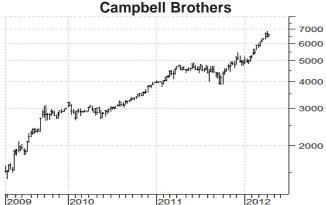

Recommended Investments

(Continued from Page 5) These businesses provide food, dairy, water and pharmaceutical testing to manufacturers, food processors and retailers from six laboratories in the UK and two in Ireland. These companies will form part of Campbell Brothers new *Life Sciences* division which the group seeks to build into a global food/pharmaceutical laboratory services business.

With its shares trading on a Price/Earnings ratio of 20-30, Campbell Brothers is well placed to grow through the "conglomerate merger" technique popular in the 1960's (see the bottom of this page).

Campbell Brothers, of course, has a better business strategy than the conglomerates of another age. It acquires businesses primarily to enter new markets or acquire new technologies, which it then expands throughout its existing network or through building new laboratories. Real shareholder wealth is created through *organic* growth - expanding existing businesses, winning new customers, increasing revenues and cashflows and profits!

A high share valuation, however, can help the company to also grow earnings per share through acquisition (i.e. in the style of the conglomerate mergers) and places it in a strong position for any potential "industry rationalisation" (i.e. merger between existing large competitors) which could (1) build further economies of scale, (2) eliminate excess competition (i.e. to improve pricing and profit margins) and (3) build market leadership or market dominance.

<u>**Cardno's**</u> cash issue was 96% subscribed by shareholders, with the remainder placed with shareholders under the "top up" facility.

A short History and Investment Lesson from the Rise (and Fall) of Conglomerates:

Conglomerates prospered during the 1960's - mainly owing to high market ratings which allowed them to issue shares at high valuations (e.g. a P/E of 15-30) to acquire businesses at lower valuations (e.g. a P/E of 7-15). This *conglomerate merger technique* boosted earnings per share - with this growth justifying their high market ratings and leading to further capital appreciation . . . continuing a cycle of growth and ever appreciating shareholder wealth!

Most of the conglomerates of the 1960's lacked above average business skills and were <u>not</u> able to properly manage their diversified acquisitions - or achieve organic growth in those businesses. But as long as they enjoyed high share valuations, ever larger takeovers provided the earnings per share growth needed to keep the share price rising and produce high returns for shareholders. This situation ended with the recessions, high interest rates and severe stockmarket declines in the 1970's.

Most conglomerates (including companies like **Brierley Investments**) then performed poorly, falling in value and destroying shareholder wealth.

There was one - and only one - conglomerate that successfully adapted to the changing environment: US based ITT (which started in 1920 as International Telephone & Telegragh, but had grown into a conglomerate in the 1960's, owning businesses like Sheraton Hotels and Avis) successfully reversed the conglomerate *merger* technique by selling off many of its 350 subsidiaries at higher valuations (e.g. a P/E of 15-30) and using the proceeds to repurchase its own shares which traded at a lower valuation (e.g. a P/E of 7-15). These actions again boosted earnings per share over the following decades, creating a new cycle of strong growth and rapid share price appreciation!

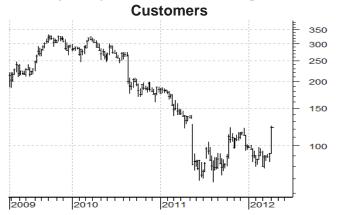

Customers has received a takeover offer of 127 cents per share in cash (i.e. \$173 million in total) from Canadian based **DirectCash Payments Inc**. The takeover will be via a "scheme of arrangement" (so requires 75% shareholder approval to become compulsory, compared with 90% under a regular takeover), with shareholder approval sought at a meeting on 18 June and settlement on 4 July 2012.

There is a very high probability that the scheme of arrangement will be completed (i.e. that shareholders will receive 127 cents in July), but there is always a possibility that a second buyer may appear with a higher offer . . . which *could* lead to competitive bidding. Despite a downturn in current year profitability, Customers is being taken over relatively cheaply.

So shareholders should HOLD for the 127 cents (with a possibility of more) in seven weeks, rather than sell on-market now for just 122 cents.

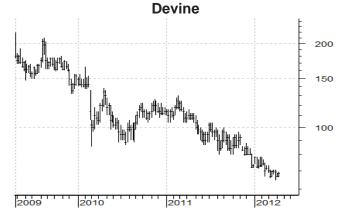

In fact, arbitrage investors may buy Customers shares on-market for 122 cents, earning a 5 cents (4.1%) profit over the next seven weeks (i.e. equal to a 30% per annum rate of return). There is a very small risk that the scheme will not be completed (and the shares fall back to 95-100 cents) and perhaps a 10-15% chance that the consideration will be raised (either owing to investrors holding out for a higher price or owing to a second buyer).

DirectCash is the largest ATM and provider of prepaid cards in Canada and also operates ATMs in the United States and Mexico, plus prepaid cards in the US, UK and Australia. It has binding, but conditional, financing arranged for the Customers acquisition.

Devine reports pre-selling 70% of the first two stages of its master planned community at Gladstone in a pre-launch to registered local buyers and local builders . . . and expects to pre-sell the balance ahead of the official public launch later in April. This Gladstone development will offer 2900 sections over the next 10-15 years.

The first two stages of the *Orleana Waters* community in South Australia has been almost 75% pre-sold since being launched in February. This project will progressively develop around 640 sites.

Finbar Group has achieved "practical completion" of its *Fairlanes Apartment and Office* project. The project will be officially opened on 27 April, with settlements expected during May. The company has sold 121 of the 128 apartments and will retain ownership of the six levels of office space as an investment. Around half of that office space has been leased - and Finbar Group will also relocate its head office to this property.

Completion and settlement of this project should enable the company to achieve the "moderate increase in profits" forecast for this year.

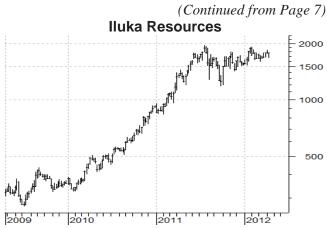

<u>Iluka Resources</u> reports a 13.3% fall in March quarter revenues to \$196.3 million (compared with the March 2011 quarter) owing to lower sales and production as a result of lower market demand. Revenues would have been up about 14% except that a \$62 million shipment of high grade Titanium Dioxide, scheduled for shipment in March, was delayed until early April.

Zircon production was 18.4% lower at 115.7 thousand tonnes, Rutile production was 23.4% lower at 217.0 thousand tonnes and Ilmenite production rose 12.9% to 123.6 thousand tonnes.

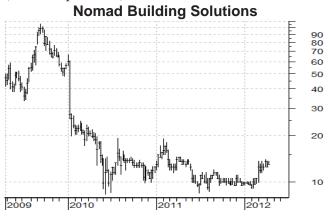

(Continued on Page 8)

Recommended Investments

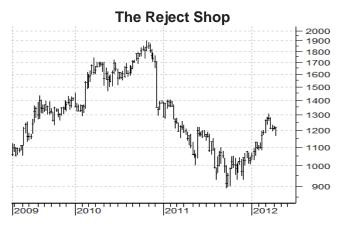

<u>Nomad Building Solutions</u> half year presentation has disclosed some additional information about the reported \$2,153,000 profit to 31 December.

The sale of the rental assets contributed a pre-tax profit of \$2.9 million, while the Modular business (under review) operated at a *loss* of 4.2 million. That would indicate a pre-tax *trading* profit (from the remaining businesses) of around \$4.4 million - although the company states "normalised earnings" (before interest and tax) and excluding these two items "of \$5.2 million" (1.9 cents per share).

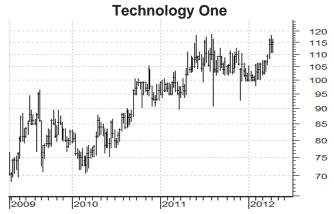

The Reject Shop has a new television and radio campaign to "eliminate negative connotations" to its brand name. The company started in 1981 selling factory seconds, but no longer sell end of line or seconds stock. The Reject Shop brand has "strong recognition and recall", so the new campaign encourages consumers to "reject cost" and find better ways to shop.

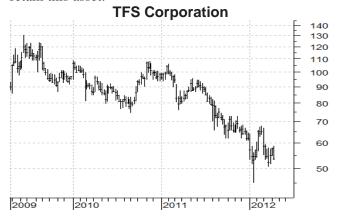

The company has also launched an *iPhone app* to display its product catalog, but with an average transaction size of \$11 the company is <u>not</u> planning an e-commerce website at this time.

Technology One has released two software solutions for not-for-profit organisations, *OneHousing* for community housing providers and *OneCommunity* for community service providers. The company has secured six new Australian customers for these packages, worth \$3.25 million.

TFS Corporation reports that the debt outstanding from 2010 has been only partially settled. 80 hectares of plantation have therefore been transferred to the purchaser and ownership of the remaining 300 hectares has reverted to TFS Corporation. The company is still evaluating whether to sell to other "interested parties" or retain this asset.

Subscriber's Contrary Opinion Buy Signals

Every so often we get an email (or several) which appear to capture the mood of the market. For example, we received a cluster of "Panic! Sell everything!" emails in March 2009 (see "Market Analysis" Issue No 441, March 2009) - which marked the <u>very bottom</u> of the *Global Financial Crisis!*

Earlier this month we received this email:

"Dear James,

We will not be renewing our subscription. Instead, we will be spending the next few years paying off our house. We'll subscribe again when we're ready to invest in the sharemarket again."

We'd rate that another contrary opinion BUY signal!! At market tops people write to tell us they are giving up their job, taking on a margin loan and plan to make big money on the stockmarket (usually in those booming "high growth shares" that we were too stupid to recommend!). At market lows people want to give up on the stockmarket to focus on repaying debt!

Both are extreme views - and both are likely to be wrong.

Investment Strategy: Repaying Mortgage Debt or Investing in the Stockmarket

Conventional "financial planning" wisdom suggests that people should first repay all of their mortgage debt *then* invest for retirement. We have always disagreed.

Certainly it makes sense to repay mortgage debt (and save non-deductible interest payments) *before* investing in interest bearing investments (paying *taxable* interest at a lower rate), but this is <u>not</u> true for investments in the stockmarket.

There are three main reasons why we recommend people start investing in the stockmarket as soon as possible in life, even while they have mortgage debt:

Firstly, stockmarket returns do <u>not</u> accrue evenly year in and year out, but randomly, sometimes with good decades and bad decades. Over a person's most important investment years (i.e. perhaps the 40 years from age 25 to 65) it is possible that the largest stockmarket returns will accrue in the *first* 20 years and lower returns may be earned in the last 20 years. In that case, paying off the mortgage first and then only later investing in the stockmarket will yield poor returns.

<u>Investing in the stockmarket, while still repaying mortgage debt, creates *time diversification* - more years invested in the stockmarket and more chance to benefit from those periods of high returns and minimise the impact of the bad years.</u>

Secondly, <u>investing even small amounts in the stockmarket from a younger age will *build valuable long term* <u>experience</u>. Most new investors make mistakes and, hopefully, learn from those mistakes and go on to become better, more successful investors. Its better to make those mistakes when you are young - and have only a small amount of money at risk - rather than later in life when (having repaid the mortgage) you have large amounts to invest (and risk) in the stockmarket!</u>

Thirdly, <u>returns benefit from compounding over *many years*</u>. To grow to a \$100,000 sum at age 65 (at the stockmarket's average return of 10% per annum) would require a single initial investment of \$38,600 at age 55, or \$14,900 at age 45, or \$5,730 at age 35 or just \$2,210 at age 25.

Just a little investment in the stockmarket early is better than a very large investment later!

Page 10

Computer Selections of NZ Shares based upon our Comprehensive Share Selection Criteria

For an explanation of this table see the *Share Selection Methods* report available from our website. These shares are not formal "buy" and "sell" recommendations, but the "Under-Valued", "Best Performing" and "Income" shares should be considered for purchase, while the "Over-Valued" and "Worst Performing" shares can generally be sold to release money for re-investment in more attractive shares.

"Insider" Trades in NZ Shares

The table below shows the number of Purchases and Sales of a company's shares by its Directors over the last twelve months (excluding "Neutral" situations where the number of Buyers and Sellers were equal). Shares where many "insiders" have been buying can outperform the market for up to two years, while shares where many "insiders" have sold can under-perform for a similar period.

"Insider"	Indicators

April 16, 2012. Page 11 Computer Selections of Australian Shares based upon our Comprehensive Share Selection Criteria

For an explanation of this table see the *Share Selection Methods* report available from our website. These shares are not formal "buy" and "sell" recommendations, but the "Under-Valued", "Best Performing" and "Income" shares should be considered for purchase, while the "Over-Valued" and "Worst Performing" shares can generally be sold to release money for re-investment in more attractive shares.

Page 12 Market Analysis "Insider" Trades in Australian Shares

The table below shows the number of Purchases and Sales of a company's shares by its Directors over the last twelve months (excluding "Neutral" situations where the number of Buyers and Sellers were equal). Shares where many "insiders" have been buying can outperform the market for up to two years, while shares where many "insiders" have sold can under-perform for a similar period.

"Insider" Indicators Last 5 wks: 73.8% Buyers Last 13 wks: 77.8% Buyers

Review of Shares with Insider Buying

Speewah Metals (code SPM) is a small, \$25 million capitalisation, exploration company where there have been eight *insider* buys (plus two small buys, that we don't add to our data) over the last year. The company also owns the largest titanium/vanadian magnetite deposit in Australia.

Insider trades can be an important indicator in analysing smaller resources exploration - where little public information is available and it is difficult for outsiders to evaluate the potential for the company.

The rise in the value of titanium minerals has significantly added to the value of a potential mining project, while exploration over the last year has significantly upgraded Speewah Metal's resources (i.e. to an inferred resource 41% higher at 4,700 million tonnes) and the company has completed metallurigical testing using the mixed chloride leaching process. This has produced high recoveries of high-grade TiO₂, high grade V_2O_5 and iron ore.

It also has 6.7 million tonnes of high grade Fluorite (CaF_{2}) resource and some gold/copper targets.

The company is currently talking about the potential to produce 75,000 tonnes of TiO_2 (worth around \$250 million), 13,500 tonnes of V_2O_5 (worth \$180 million) and 400,000 tonnes of iron ore (worth \$70 million) annually. At that rate, mine life would be 1000 years - giving significant potential to increase annual production.

The company is seeking potential Chinese partners to help finance mining and processing.

So Speewah Metals is sitting on resources worth many hundreds of *billions* of dollars, yet with an issued capital of 130,700,000 shares the company is being valued at a market capitalisation of just \$25 million.

The one thing Speewah Metals does <u>not</u> have is very much cash. At 31 December there was only \$1.2 million of cash in the bank - having spent almost \$6.4 million over the six month period (mainly on exploration). So the company will need to place additional shares in the very near future to remain solvent (or receive a cash sum from bringing in a partner).

The *insiders*, however, clearly see value in this company: The Chairman, A Barton, has made five on-

market purchases over the last year. He bought 280,232 shares at 25¹/₂-26 cents in June 2011, 250,000 shares at 23¹/₂ cents and 150,000 shares at 18 cents in September, 200,000 shares at 20 cents in October and 300,000 shares at 14¹/₂-16 cents in November. That takes his holding to 13,129,768 shares or 10.05% of the company.

Market Analysis

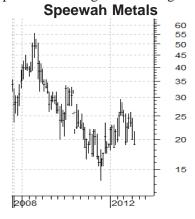

Non-Executive Director D Carew-Hopkins, bought 50,000 shares at 19¹/₂ cents in November 2011, lifting his holding to 450,000 shares.

Executive Director R Wolanski, bought 50,000 shares at 28¹/₂ cents in May 2011 and 50,000 shares at 23 cents in June (plus 50,000 shares at 18 cents in October and 50,000 shares at 16¹/₂ cents in November - but both less than \$10,000 so not included in our statistics) to lift his holding to 644,768 shares.

Like many small exploration companies, Speewah Metals does <u>not</u> have the cash to develop its resources, but those resources appear to be very valuable. That would suggest that it will be able to raise finance for mining and production from bringing in an equity partner - or that the company may eventually be acquired by a large mining company seeking to take 100% ownership of its resources.

Summary and Recommendation

This is a high risk situation, but could have strong potential to be re-rated in value. Speewah Metals could prove an attractive buy for investors seeking a speculative investment in a company seeking to transform a major mineral deposit into a long term mining business.

April 16, 2012.

<u>Silver Chef</u> (code SIV) *insiders* have made 9 on-market buys (and no sells) over the last year - in addition to taking up shares in the recent cash issue.

The company provides financing for small businesses through the provision of flexible equipment leases. 70% of customers are restaurants and cafes, but it is expanding into new sectors and into New Zealand. Business risk is diversified, with over 11,000 rental agreements and with no customer accounting for over 1% of revenues.

At 310 cents, the shares trade on a Price/Earnings ratio of 11 and offer a Dividend Yield of 6.1% - which is a low valuation for a company with a high return on equity and good long term growth potential (subject to raising additional debt and equity capital to finance that growth).

The company has just raised \$10 million in new capital (through a 2 for 13 cash issue at 280 cents) and increased its bank facility from \$70 million to \$110 million - which provides the financial resources for further growth over the next several years.

For the year to June 2011, revenues were 27.5% higher at \$62.9 million and net profits rose 28.3% to \$6,691,000. Earnings per share were up 20.4% at 28.9 cents and the annual dividend 5.6% higher at 19.0 cents.

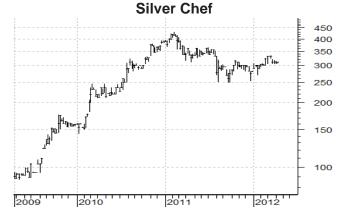

Revenues rose 30.1% to \$39.2 million for the six months to 31 December 2011, with net profits up 37.7% to \$4,212,000 (18.2 cents per share) and a 5.6% higher interim dividend of 9.5 cents.

On capital increased in the recent cash issue, Silver Chef is predicting (diluted) earnings per share of about $32\frac{1}{2}$ cents (up 13%) and with a 60-70% payout ratio that would support an annual dividend rate of 19.5-22.5 cents (up 3-18%)

Silver Chef became popular with brokers in early 2011 - driving the share price to a high of 428 cents - but the share price fell sharply during 2012. The shares are probably more attractive for purchase today - at a lower price and with the new equity and expanded bank facility available to finance future growth.

Summary and Recommendation

This is a sound, well financed company capable of earning a high return on investment and with excellent potential to expand its business. The shares should be a good investment, providing a high current income yield, plus above average growth for many more years.

NextDC (code NXT) is a relatively new company established to build Data Centres in all major Australian cities. While *insiders* are knowledgeable investors - and there have been five on-market buys (and no sells) over the last year - we believe investors do need to be cautious about this business.

NextDC is a popular hi-tech growth company that is doing many things right. It was floated in November 2010, raising \$40 million from the offer of shares at 100 cents each. In March 2011 it raised a further \$47.8 million through placements and a Share Purchase Plan at 140 cents and in August it raised \$50 million from further placements at 175 cents.

The company's first (and relatively small) data centre went live in October 2011 so to date NextDC has generated no meaningful revenues and recorded small losses - but predicts that it will earn a 15-30% return on capital invested in its data centres. Revenues and profits should grow as it completes its other data centres, wins customers (and revenues) and, in future years, expands capacity of its data centres.

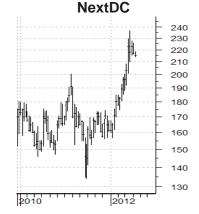

The demand for data centres is growing rapidly and the expansion of *Cloud Computing* and the *National Broadband Network* rollout will drive further demand in the years ahead.

So, why to we see the need for caution? We believe the provision of data centre services will be driven by the same economics as other (more traditional) computing, telecommunication and data services ... and be subject to *Moore's Law* which will constantly drive down future revenues. Growth in the demand for telecommunications and data services did <u>not</u> provide a good return for investors in traditional Telecommunications network companies (i.e. Telstra or Telecom NZ) and, despite any shortage of data centre capacity in the short term, we believe the same will likely be the case for data centres.

If falling equipment prices, new technologies and competition drove down the selling price of data centre services, then the *currently* expected 15-30% return on the investment would rapidly decline.

Summary and Recommendation

Yes, we need data centres and hopefully *someone* will invest the capital to build them. The long term returns from providing technology infrastructure, however, have historically been disappointing and the economics of that sector do not appear to have changed. NextDC will probably be a very efficient operator in this sector, but even that may not guarantee acceptable, long term returns for shareholders.
